

Sprint 2 Retrospective

Completed Work:

- HMTY-16 Administrator read and write prescriber information
- HMTY-15 Prescriber verification platform
- HMTY-26 Green resources
- HMTY-24 Prescriber - View all logged prescriptions

What was good?

- We made a lot of reusable components that should be able to speed up the development of the rest of the tickets
- All scraper are done
- We should be on track to implementing all required features on time

What was bad?

- Everybody had/has midterms to do
 - Overall slow progress, but should still be able to finish the rest of the tickets in Sprint 3
- Tickets are still stuck in PR
- Rough communication on distribution of tickets/work on HMTY-15

Actions:

- Review PRs and respond to changes plz and thank you
- Get better estimates to track progress better
- Better overall communication on the progress of each ticket

Other Notes:

- Progress on the rest of the tickets should hopefully be faster now that core components are created
- Some tickets (HMTY-17) had to be removed from the sprint
